

Technical Project Manager

inaffect AG

80 % – 100 %

Remote and on site

Start from November 2026

inaffect develops custom software and hardware solutions. Would you like to lead client projects, guide a small team and get hands-on with the technology yourself? With us, you work in a collegial, uncomplicated environment: we talk openly, support each other and turn ideas into reality together.

Your responsibilities

- **Projects and clients:** You clarify requirements, prepare quotes and plan projects. You are responsible for deadlines, quality and budget, raise risks early and develop follow-up business with our clients.
- **Team and day-to-day business:** You coordinate operational project work, set priorities and plan capacity. You lead the team on a professional level, clarify responsibilities and bring in external specialists when needed.
- **Technology and development:** Together with the team, you design architectures and interfaces for software and hardware projects. For demanding questions, you review code or build a prototype yourself.
- **AI in everyday work:** You use AI in development, planning, testing and documentation and help the team do the same. You assess its benefit and quality and protect confidential data.
- **Profitability:** You estimate effort realistically and keep an eye on utilisation and project margins. You align commercial matters with management, accounting and administration.

What you bring

- Several years of hands-on software development and experience with software architecture; a technical education or a comparable professional background.
- Experience leading demanding client projects or small teams, with responsibility for deadlines, quality and budget.
- Practical experience with AI tools and a good understanding of their possibilities and limits.
- Entrepreneurial thinking, commercial awareness and enjoyment of client contact. You work independently and pragmatically, communicate respectfully and make clear decisions.
- Excellent German and confident written and spoken English are required.

Experience with firmware, hardware, IoT or external development partners is a plus.

What awaits you

Varied client projects, direct exchange in a small team and room for your own ideas. You combine remote work with on-site collaboration and actively shape our technical development and the way we work.

Let's get to know each other

Apply via jobs@inaffect.net with your CV and a few lines on what appeals to you about the role. We look forward to getting to know you.
